

Q. How many CG operators does it take to run a crawl?

(or a banner, or a leaderboard, or financial data, or rosters, or weather input, or election results, or score updates, or]

A. None.

With CG Excelerator, updating on-air information on the fly is a snap.

CG Excelerator, *ppg*'s new on-air data-management system, frees up your CG operator by making banners and crawls virtually automatic!

- > Crawls - are fully automatable and easy to use
- > Lower Third Banners - be ready for any situation at the click of a button
- > Input Offline - away from the office, whether the office is a TV station, production house or a remote truck.

CG Excelerator is revolutionizing the way information-rich graphics are manipulated and managed in need-it-now production operations all over the country.

CG Excelerator saves time. And in broadcast production, time is more than money, time is everything.

CG excelerator

“CG Excelerator has dramatically improved our graphic workflow - saving us time, reducing expense, sharpening our accuracy while adapting quickly to our changing post-production landscape.”

Dominic Ambrosio
HBO Studio Productions

CG Excelerator is a Windows Excel-based application that speeds up the information manipulation process and automates complex data management tasks for on-air graphics.

CG Excelerator is not machine or platform specific. Simply connect to your Chyron, Pinnacle or Pixel Power character generator through any serial or ethernet connection and your data, however complicated, is literally a few clicks away.

We'll show you how running banners, crawls and all kinds of on-air data just got a lot easier. Let us show you how CG Excelerator can get your CG manpower and money working more efficiently than ever.

Technical requirements

Windows 98/NT/2000/XP
Pentium II CPU, 166 Mhz
256MB RAM (512MB recommended)
50MB Hard Drive Space
CD-ROM Drive
10/100BaseT Network Interface
Serial Port
Microsoft™ Excel (2002 preferred)

Setting-up CG Excelerator is simple.
Using CG Excelerator is even simpler.
